Temporary identification system

Print, cut and seal

PREVENT SORTING ERRORS

Color coded tags make sorting a simple task. Shirts can be sorted into movable transporters or numbered rail clips right off the folder or finishing unit, reducing the amount of labor required. Labels print clearly, adhere firmly, and yet peel off easily leaving no residue. Label length adjusts automatically to match the number of characters used.

Store... day... week... lot... bundle...

The Thermo-Seal® tag gives positive lot control to prevent costly, time consuming mix-ups and lost garments. Large clearly printed letters and numerals make sorting easier. Four to twelve characters are set in seconds for any code. The tape in eleven solid colors allows you to combine color code with your printed code making sorting easier and faster.

Thermo-Seal® taperolls

The tape specifically made for all Thermo-Seal® temporary marking machines. The eleven colors are orange, yellow, red, gray, lavender, white, green, blue, pink, gold and tan. Adheres to cotton, poly/cotton blends, loose weave polyester and wools.

Thermo-Flags® tags

Where Thermo-Seal® tape can't be applied directly to the garment, apply tape to a Thermo-Flag® and staple or pin to garment. White only.

Ink ribbon cartridge

Black indelible ink, part # RC2410-24. Prints stays clear and legible through laundering, dry cleaning and finishing operations. The ink cartridge is very easy to load.
